

Sliding glass walls systems - Technical comparative table.

The Airclos glass wall system consists of individual glass panels that slide to achieve a full opening when pushed to one or multiple ends.

operation makes this system especially suitable to close terraces and outdoor spaces, both in homes and businesses.

breaks, it will crumble into small pieces, thus avoiding the risk of accidents.

As it is an all-glass system, it is the perfect choice for those who are looking for an enclosure that protects the room while still allowing them to enjoy the view. Together with its minimalist design, its easy

Safety glass. To guarantee the safety of the system, our glass walls are manufactured with 10 mm tempered glass. This significantly increases its mechanical (bending, compression, shock, etc.) and thermal properties. In addition, if it

Sectional details.

E20

Sliding glass walls composed of glass panels. When opening the glass wall, the panels will slide together to one or several ends.

E45

Stackable glass walls composed of individual glass panels. The panels slide towards one end, where they stack on top of one another.

A32

Glass walls that can be installed without a bottom guide. Once opened, the panels are stacked, hanging from the top of the storage area.
